Tile & Grout

Sealer

Tile & Grout Sealer is a water based, ready to use, penetrating sealer that forms a durable transparent barrier against oil and water based soils. Tile & Grout Sealer chemically bonds to all grout lines and porous unglazed tile such as marble, granite, limestone, slate, terrazzo, sandstone and flag stone.

pH: 4.3

Directions for use:
Pretest in an inconspicuous area to determine desired results.

Clean surface with Eclean's Neutral Tile & Grout Cleaner to prepare for Sealer application. Rinse floor thoroughly with clean water. Remove excess water, allow floor to dry.

Do not dilute, use full strength: Evenly apply a liberal amount of sealer using a pump up sprayer, mop or roller avoiding overspray onto surrounding surfaces, wipe off or squeegee excess from non porous surfaces. When sealing only grout lines use a small brush. Allow 15-20 minutes for sealer to penetrate the surface and wipe up any extra sealer. A second coat may be applied 30 minutes later for those more porous and absorbent surfaces.

*Sealer cures completely within 24 hours. Foot traffic on area can resume after 8 hours.
1 gal will cover approximately 400 to 800 square feet depending on absorbency and porosity of the tile and grout.*
